Abstract

The reason for the investigation was to think about the Boldness Behavioral Attitude of Players of Various Combat Games. For the present investigation analyst has chosen 30 players from Pune inside gathering configuration was utilized for the present examination. 10 Players from each (Boxing, Wrestling and Karate Players) who were taken an interest in Inter University Tournament of Savitribai Phule Pune University, Pune was chosen for study by Purposive non – likelihood random testing strategy. The age scope of respondents was 18-25 years. Multi Assessment Personality Series (MAPS) Questionnaire was utilized for assortment of information. This scale was created by Sanjay Vohra. The scale contains 147 complete sentences and everything is given three options the players needed to choose one of the three elective explanations. And just the score of intensity was taken for this investigation. To see the distinction between Boxing, Wrestling and Karate players in reference to Boldness Behavioral Attitude One Way Analysis of Variance was applied. Huge level was kept at 0.05 level. Result shows that by observing the Mean of intensity of players of various battle games there is contrasts. To see these distinctions was huge or not analyst has compute One - Way Analysis of Variances, it was discovered that there was noteworthy diverse between players of various game in reference to Boldness on the grounds that the determined 't' esteem for example 7.58 which is a lot more prominent than classified 't' esteem 3.35. Above examination uncovered that distinction was found between the methods for Boxing, Wrestling and Karate Players. In end it can expected that if players contrast in the degree that they change their conduct dependent on

their past and current encounters, this may speak to a potential system through which social jobs can be produced and strengthened to make considerably longer enduring contrasts between players. At the end of the day, mental elements might be kept up by interest in different games and sports exercises as a result of their job in social coordination.

Keyword: Boldness Behavioral Attitude, Boxing, Wrestling and Karate Players.

Introduction

Boldness implies daring, courage and confidence. Rather than going with the flow boldness goes against the tide. It dares to disagree with popular opinion for the sake of affirming what is true, right, and just. When others do wrong, boldness stands for what is right. Every person searches for things, people, or ideas in which to find stability and security. Some choose to put their trust in popular opinion, the security of friends, or the prosperity of wealth. However, opinions change; friends can betray a trust and wealth can vanish overnight. Truth, right, and justice on the other hand, provide a foundation which has remained far more stable throughout history than has opinion, popularity or abundance. Boldness is the gift of God to overcome this enemy. Boldness is confidence in the gospel, a message that defies fear to the uttermost. Boldness is necessary if we are going to be risk-takers and not self-preservers. And risk-taking is absolutely necessary for the progress of salvation. Finally, as I started into this issue, it became apparent to me that boldness is a highly neglected topic and one that it is vital to every believer. So many people are controlled by fears of all kinds. The person who receives the gift of boldness is delivered from a multitude of transgressions and lives in peace. Boldness is totally opposite of fearfulness. To be bold implies a willingness to get things done despite or taking risks. Boldness may be a behavioral attitude that only certain individuals are able to display. For example, in the context of sociability, a bold person may be willing to take the risk shame or rejection in social situations arising, or to bend the rules of etiquette or politeness. An excessively bold player may be aggressively while performing his skill or taking a shot. Boldness may be contrasted with courageousness of an individual and latter implies having fear but confronting it. But perhaps we could think about how evolutionary significance of boldness might play a part of debate. Players are a fiercely social and cooperative in nature and protecting members of our close social group has a sound evolutionary basis. By reducing the risks to those with whom we interact or share the

same genes, moreover our own genetic material is preserved. We're also having a strong social interaction with different group increases the chances of humanity. At the same time it's too simple to say that those players having higher boldness is associated with higher aggression. In this case, the researchers suggest that the players who are more exposed to take risk cope with this by responding more aggressively and so more boldly to threat his attitude. Players today usually constrain their aggression within carefully outlined legal and social rules so that they can show their optimum level of performance. But perhaps the aggressive nature of player in rugby still scratch an evolutionary itch inspired by an individual's impulse to be bold. Hence researcher wants to know the boldness level of players of different games.

Method

For the present study researcher has selected 30 players from Pune within group design was used for the present study. 10 Players from each (Boxing, Wrestling and Karate Players) who were participated in Inter University Tournament of Savitribai Phule Pune University, Pune was selected for study by Purposive non – probability random sampling method. The age range of respondents was 18-25 years.

Measures

Multi Assessment Personality Series (MAPS) Questionnaire was used for collection of data. This scale was developed by Sanjay Vohra. The scale contains 147 complete sentences and each item is provided three alternatives the players had to select one of the three alternative statements. And only the score of boldness was taken for this study.

Statistical Analysis

To see the difference between Boxing, Wrestling and Karate players in reference to Boldness Behavioral Attitude One Way Analysis Of Variance was applied. Significant level was kept at 0.05 level.

Table – 1

Mean & Standard Deviation of Boldness

Game	Mean	S D
Boxing Players	8.2	1.29
Wrestling Players	9.8	0.89
Karate Players	7.4	0.92

Table – 2

Comparison of Boldness of Players of different Games

SV	SS	df	MS	F
Between	27.288	2	13.644	7.58*
Within	48.6	27	1.8	

*Significant at 0.05 level

tab 'f' at (2,27) = 3.35

Result

Above tables shows that by seeing the Mean of boldness of players of different combat games there is differences. To see these differences was significant or not researcher has calculate One - Way Analysis of Variances, it was found that there was significant different between players of different game in reference to Boldness because the calculated 'f' value i.e. 7.58 which is much greater than tabulated 'f' value 3.35.

Graph

Conclusion

Above study revealed that difference was found between the means of Boxing, Wrestling and Karate Players. To see these differences was significant or not One Way Analysis of Variance was applied. It was found to be significant. It can assumed that if players differ in the extent that they change their behavior based on their previous and current experiences, this may represents a potential mechanism through which social roles can be generated and reinforced to create even longer lasting differences between players. In other words, psychological factors may be maintained by participation in various games and sports activities because of their role in social coordination.
