1	Title of the Event	SOIL CONSERVATION		
2	Date and Time	19 TH DECEMBER, 2019		
3	Sponsor/Funded by	College		
4	Objectives	Erosion and run-off commences with the dispersions or breakdown of soil particles in topsoil from the impact of rain. The dispersed soil particles and the usually more compact sub-soil slow down infiltration of the rain water into the soil. This accelerates and increases run-off which occurs when rate of rainfall exceeds infiltration rate of water into the soil. Loss of topsoil not only reduces soil fertility but also means lower water-holding capacity of the soil.
